

Step 2. Choose the hydro-power station size:

When planning new hydro power plants, the size matters, as they have different impact on the environment. The user chooses what type of potential hydro power plants that can be used for electricity generation. “small” represents hydro-power station lower than 5MW, “medium” represents hydro-power station between 5 and 50MW, “large” represents hydro-power station larger than 50MW, and “mixed” represents the combinations of all three types of hydro-power stations.
