

Step 4. Choose the environmental protection level:

A “low” environmental protection level indicates that the solar PV plants can be installed up to 1% of the land for no-protected areas, 0.5% for low protected areas, 0.2% for medium protection areas and 0.1% for highly protected areas (e.g., national parks, natural reserve).

A “high” environmental protection level indicates that the solar PV plants can be installed up to 0.2% of the land for no-protected areas, 0.1% for low protected areas, 0.05% for medium protection areas and 0% for highly protected areas.
